Sales Trends Over Time

Monthly Sales Trend: Sales exhibit consistent Q4 seasonality (Oct–Dec peaks) across all years. A clear upward growth trajectory is visible, with the 3-month rolling average confirming the trend. Year-over-year growth is strongest in Technology and Office Supplies.

Annual Sales by Category

Annual Sales by Category: Technology and Furniture lead revenue generation. Office Supplies shows the most consistent year-over-year growth. All categories show positive YoY trends.

Category & Regional Performance

Sales vs. Profit by Category

Category Alert: Furniture generates \$2.66M in revenue but records a loss of -\$193K in profit. Technology leads profitability at \$137K. Office Supplies, despite lower revenue, delivers the highest margin (~7.1%).

Regional Performance Overview

Regional Performance: West leads revenue at \$2.14M. South has the healthiest profit margin. East hovers near break-even, suggesting discount overuse. Central shows strong volume with moderate margins.

Discount Impact & Sub-Category Analysis

Discount vs. Profit: A strong negative correlation between discount rate and profit is evident. Orders with discounts above 20% consistently generate losses. This is the #1 driver of profit erosion. Technology products are most resilient to discounting; Furniture least so.

Sub-Category Winners & Losers: Accessories, Phones, Copiers and Machines lead profitability. All four Furniture sub-categories (Tables, Bookcases, Chairs, Furnishings) are unprofitable — a systemic issue requiring urgent action.

Key Business Insights

■ Furniture Is a Profit Drain

With \$2.66M in sales but -\$193K in profit, Furniture is deeply unprofitable. Aggressive discounting is the primary cause. Immediate intervention in pricing and discount policies is critical.

■ Technology Leads Profitability

Technology products yield \$137K profit from \$2.99M sales (~4.6% margin). Phones, Copiers, and Accessories are star performers — prioritize in marketing and inventory planning.

■ Office Supplies: High Margin Opportunity

Office Supplies delivers ~7.1% margins. Despite lower absolute revenue, this category is the most efficient profit generator and deserves increased investment.

■ Discounts Above 20% Are Lethal to Profits

The scatter analysis shows a hard break-even point near 20% discount. Any discount above this threshold yields consistent losses across all categories.

■ West Leads Revenue, South Leads Efficiency

West generates the most revenue but South has the best margin. This implies West may be sacrificing profitability for volume — worth investigating discount policies there.

■ Q4 Seasonality is a Growth Lever

Consistent October–December sales spikes across all four years provide a reliable window for promotions, inventory buildup, and focused sales campaigns.

Strategic Recommendations

1

Cap Discounts at 20% Across All Categories

Implement a hard ceiling on discount rates at 20%. Orders above this threshold are consistently loss-making. Use A/B testing to evaluate whether lower discounts maintain conversion rates while protecting margins.

2

Conduct Full Furniture Category Audit

Furniture's -\$193K profit demands immediate action. Review cost structures, supplier contracts, pricing strategy, and discount approval workflows. Pay special attention to Tables and Bookcases — the worst offenders.

3

Scale Office Supplies via Bundle Promotions

With the best profit margins, Office Supplies deserves more revenue focus. Create bundles pairing Office Supplies with Technology items. Launch targeted campaigns in the Corporate and Home Office segments.

4

Double Down on Technology Star Products

Phones, Accessories, and Copiers are best-in-class profit generators. Allocate 20-30% larger marketing budgets, negotiate better supplier terms for volume, and ensure robust Q4 inventory levels.

5

Implement Regional Discount Governance

East region's near-zero margin suggests managers may be over-discounting to hit volume targets. Introduce margin-based KPIs alongside revenue targets and require VP approval for discounts over 20%.
